

WHAT IS ALMI?

ALMI™ is a revolutionary rejuvenation procedure harnessing the power of your own tissues to restore volume, texture and tone. The all-natural procedure is a simple outpatient treatment that can turn back the clock with minimal-to-no downtime.

ALMI™ is different than traditional injectables, which do not offer the capability of tissue regeneration and restoration. Instead, ALMI™ is a minimally invasive procedure that has a long-lasting effect without the worry of potential side effects. By harnessing the power of your own cells to rejuvenate, it helps change patient's lives for the better.

The ALMI™ procedure utilizes adipose cells (fat) and their stem and stromal cell components, along with platelet concentrates, which are then carefully placed directly into targeted tissues where the volume and restoration are needed.

By inserting the cells into the affected area, this amplifies the body's capabilities for more efficient restoration/regeneration of the tissue. Depending on where the tissue and cells are inserted, the ALMI™ procedure has been proven to spark hair follicles, rejuvenate collagen and provide structural support for volume loss.

Are Collagen Treatments More Effective than Fillers?

Typical treatments for collagen loss include fillers, fat grafting, or even facelifts. However, these procedures can be costly, involve major surgery, or, in some instances, are not long lasting (such as with fillers or traditional fat grafting). Fillers, in particular, do not contain the components necessary to stimulate collagen growth or rejuvenation of damaged tissue. Without the ability to promote a new blood supply or new collagen growth, which aid in addressing textural and tone issues, fillers may leave a lot to be desired – and while there is an immediate result, they may not last long enough.

ALMI Procedure for Collagen Loss

Enter **ALMI™**. The ALMI™ (Autologous Lipocyte Micronized Injection) Procedure is used to inject a patient's micronized fat and autologous (meaning "obtained from the same individual") platelets directly into the area of concern, similar to that of traditional fillers. Injected into the face, ALMI™ will rejuvenate damaged tissue, fill hollowed out areas (such eye troughs or

temples), and smooth out wrinkles and lines. ALMI can help bring back a more defined jawline and chin area. ALMI will restore texture, tone, and elasticity, and the results can improve over time as the collagen is stimulated. When injected into the lips, ALMI™ provides plump and beautiful lips and helps to remove those little lines around the lips, a chief complaint of aging, even among younger patients. It can help address the aging of the skin of neck and chest. The ALMI injections may or may not be followed with PRP – you and your physician will discuss the type of treatment you will be receiving.

Finally, injected into hands, ALMI™ will rejuvenate, smooth, and plump the hands, restoring that youthful look in the process, often taking years off their appearance.

How Much is Injected to Stimulate Growth?

With the ALMI™ Procedure utilizing the patient's own tissues, the only limit to how much is injected, and thus used to stimulate growth, renew and refresh the face and hands is how much viable tissue (fat) is harvested. This benefits the patient by not having to determine how much to purchase, but rather, the desired outcome that the patient and physician determine is best for that individual patient. The procedure is typically priced as a

whole treatment, rather than a by-the-syringe cost, and this does vary based on the patient & physician location. The procedure itself is done right in your physician's treatment room with little to no downtime and is done using local anesthetic for the harvest and treatment areas.

Results for face and hands are seen immediately and continue to improve over time. Many patients report the "ALMI™ Glow," the effect of their skin taking on a youthful, healthy glow due to the rejuvenation process of the bio-cellular milieu, as well as a more youthful, rejuvenated appearance.

ALMI™ can help fight and restore the signs of aging:

- Wrinkles
- Texture
- Tone
- Structure
- Elasticity
- Sun Spots

ALMI rejuvenates you naturally. Isn't that beautiful?
